

Numpy (numpy.org/en)

array initialization

```
np.zeros(10, dtype=int) # return initialization
np.zeros(10, dtype=float) # single precision array of size 10
np.ones(10) # initialize the array
np.empty(10) # empty array
np.empty(10, dtype=int) # empty array
np.zeros_like(x) # array with same size and shape of x
np.linspace(0, 10, 10) # 100 points from 0 to 10
np.arange(0, 10, 1) # points from 0 to 10 with step 1
np.linspace(0, 10, 10) # 100 log-spaced from 0 to 10
np.empty()
```

indexing

```
x = np.arange(10) # initialization with 0 - 9
x[0] = 1 # set
x[1:] = 2 # set values 1 to 9
x[5:] = 3 # general form of indexing/slicing
x[::2] # returns to every second
x[0, 1, 2, 3, 4] # returns array with values of the columns
x[:, 0] # returns to all rows
x[0] # return 1st element
x = np.arange(10, 15, 0.5) # initialize array to 10 with step 0.5
x[0] # return each element condition
```

array properties and operations

```
x.shape # a tuple with the lengths of each axis
len(x) # length of axis 0
x.ndim # number of dimensions (axis)
x.size # array along axis
x.flatten() # collapse array to one dimension
x.ravel() # return single computer
x.astype(int) # cast to integer
np.arange(10, dtype=int) # return array of integer along a given axis
x.sum() # return sum of all elements
x.mean() # mean of all elements
x.min() # min of all elements
x.max() # max of all elements
x.sort() # sort all elements
```

boolean arrays

```
x > 5 # a boolean array with boolean values
(x > 5) & (x < 10) # a boolean logical and
(x > 5) | (x < 10) # a boolean logical or
~x # a boolean logical array
```

elementwise operations and math functions

```
x * y # multiplication with scalar
x / y # division with scalar
x + y # addition with scalar
x - y # subtraction with scalar
x ** y # power with scalar
np.exp(x) # exponential (e to the power of x)
np.exp2(x) # base 2 exponential
np.exp10(x) # base 10 exponential
np.exp10(x, base=10) # base 10 exponential
np.exp10(x, base=10) # base 10 exponential
np.exp10(x, base=10) # base 10 exponential
np.exp10(x, base=10) # base 10 exponential
np.exp10(x, base=10) # base 10 exponential
np.exp10(x, base=10) # base 10 exponential
np.exp10(x, base=10) # base 10 exponential
```

inner / outer products

```
np.dot(a, b) # inner product of a and b
np.dot(a, b, out=None) # inner product of a and b
np.dot(a, b, out=None) # inner product of a and b
np.dot(a, b, out=None) # inner product of a and b
np.dot(a, b, out=None) # inner product of a and b
np.dot(a, b, out=None) # inner product of a and b
np.dot(a, b, out=None) # inner product of a and b
np.dot(a, b, out=None) # inner product of a and b
```

reading / writing files

```
np.loadtxt('data.txt', dtype=float, delimiter=',') # load data from file
np.loadtxt('data.txt', dtype=float, delimiter=',') # load data from file
np.loadtxt('data.txt', dtype=float, delimiter=',') # load data from file
np.loadtxt('data.txt', dtype=float, delimiter=',') # load data from file
```

interpolation, integration, optimisation

```
np.interp(x, xp, yp) # 1D interpolation
np.interp(x, xp, yp) # 1D interpolation
np.interp(x, xp, yp) # 1D interpolation
np.interp(x, xp, yp) # 1D interpolation
```

fft

```
np.fft.fft(x) # complex Fourier transform of x
np.fft.fft(x, n=None) # complex Fourier transform of x
np.fft.fft(x, n=None) # complex Fourier transform of x
np.fft.fft(x, n=None) # complex Fourier transform of x
```

rounding

```
np.round(x) # round to nearest integer
np.round(x) # round to nearest integer
np.round(x) # round to nearest integer
```

random variables

```
from numpy import random, rand, randn, randint
random.seed(12345) # set random seed
rand() # random scalar
randn() # random scalar
randint(10, 100) # random scalar
randint(10, 100) # random scalar
```

Matplotlib (matplotlib.org/en)

figures and axes

```
fig = plt.figure(figsize=(10, 10)) # initialize figure
ax = fig.add_subplot(1, 1, 1) # add subplot to a figure
fig, ax = plt.subplots(1, 1, figsize=(10, 10)) # add subplot to a figure
fig, ax = plt.subplots(1, 1, figsize=(10, 10)) # add subplot to a figure
```

figures and axes properties

```
fig.set_size_inches(10, 10) # set figure size
fig.set_dpi(100) # set figure dpi
fig.set_figwidth(10) # set figure width
fig.set_figheight(10) # set figure height
fig.set_xlabel('x-axis') # set x-axis label
fig.set_ylabel('y-axis') # set y-axis label
fig.set_title('title') # set title
fig.set_xlim(0, 10) # set x-axis limits
fig.set_ylim(0, 10) # set y-axis limits
fig.set_zlim(0, 10) # set z-axis limits
fig.set_zorder(1) # set z-order
fig.set_alpha(0.5) # set alpha
fig.set_facecolor('white') # set face color
fig.set_frameon(True) # set frame on
fig.set_tight_layout(True) # set tight layout
```

plotting routines

```
ax.plot(x, y, 'r-', lw=2) # plot x and y
ax.plot(x, y, 'r-', lw=2) # plot x and y
ax.plot(x, y, 'r-', lw=2) # plot x and y
ax.plot(x, y, 'r-', lw=2) # plot x and y
ax.plot(x, y, 'r-', lw=2) # plot x and y
ax.plot(x, y, 'r-', lw=2) # plot x and y
ax.plot(x, y, 'r-', lw=2) # plot x and y
ax.plot(x, y, 'r-', lw=2) # plot x and y
```

Scipy (scipy.org/en)

interpolation

```
from scipy.interpolate import interp1d # 1D interpolation
from scipy.interpolate import interp2d # 2D interpolation
from scipy.interpolate import interp3d # 3D interpolation
```

integration

```
from scipy.integrate import quad # 1D integration
from scipy.integrate import quad_vec # 1D integration
from scipy.integrate import quad_vec # 1D integration
```
